

Online Gift Store Sales Analysis

Problem Statement

You have been provided with sales data from an Online Gift Store. The dataset contains information about orders, customers, products, sales transactions, quantities purchased, delivery dates, and customer locations.

The objective of this project is to analyze the sales performance of the business using Microsoft Excel, Power Query, Power Pivot, and DAX. The analysis aims to uncover valuable insights related to revenue generation, customer purchasing behavior, product performance, and operational efficiency.

Business Questions

1. What is the overall revenue generated by the store?
2. How many orders were placed during the analysis period?
3. What is the average revenue generated per order?
4. How does revenue vary across different months?
5. Which products generate the highest revenue?
6. Which product categories contribute the most to sales?
7. Which cities generate the highest revenue?
8. Which cities place the highest number of orders?
9. How much does each customer spend on average?
10. Which occasions generate the highest sales revenue?
11. Which products are most popular for different occasions?
12. What is the relationship between quantity ordered and revenue generated?
13. What is the average delivery time for customer orders?
14. Who are the high-value customers based on purchase behavior?
15. Are there any seasonal or monthly trends in sales performance?

Tools Used

- Microsoft Excel
- Power Query
- Power Pivot
- DAX
- Pivot Tables & Pivot Charts

Project Goal

Generate actionable insights that help improve sales strategy, customer satisfaction, inventory planning, and business growth.
