

Problem Statement

You have been provided with sales data from an Online Gift Store. The dataset contains information about orders, customers, products, sales transactions, quantities purchased, delivery dates, and customer locations.

The objective of this project is to analyze the sales performance of the business using Microsoft Excel, Power Query, Power Pivot, and DAX. The analysis aims to uncover valuable insights related to revenue generation, customer purchasing behavior, product performance, and operational efficiency.

Create a dashboard and answer the following key business questions to help the company improve its sales strategy and optimize customer satisfaction:

1. Total Revenue: Identify the overall revenue.
2. How many orders were placed during the analysis period?
3. Average Order and Delivery Time: Evaluate the time taken for orders to be delivered.
4. Monthly Sales Performance: Examine how sales fluctuate across the months of 2023.
5. Top Products by Revenue: Determine which products are the top revenue generators.
6. Customer Spending Analysis: Understand how much customers are spending on average.
7. Sales Performance by Top 5 Product: Track the sales performance of top 5 products.
8. Top 10 Cities by Number of Orders: Find out which cities are placing the highest number of orders.
9. Order Quantity vs. Delivery Time: Analyze if higher order quantities impact delivery times.
10. Revenue Comparison Between Occasions: Compare revenue generated across different occasions.
11. Product Popularity by Occasion: Identify which products are most popular during specific occasions.
